

Divert-O Frequently Asked Questions

Product Name: Divert-O Fly Repellent

EPA Registration Number: This 25(b) product is exempt from registration with the Federal Environmental Protection Agency under FIFRA regulations.

Formulation: Ready to Use Oil Concentrate

Active Ingredient and Percent Included: Geranoil 29.9% Thyme Oil 31.6%

Package Sizes: 1 gallon

Use Restrictions:

- Do not smoke while applying this product.
- Use precautionary measures to ensure that there is no direct exposure to humans, pets, domestic animals or non-target wildlife.
- Do not apply directly to plants to avoid damage or discoloration.
- Do not apply to the point of drench.
- Avoid contact with eyes
- Will damage plants and vegetation.

AUTOMATED USE RESTRICTIONS:

Fogging system must create a 'dry' fog and droplets no larger than 5 microns. Fragrance must be present to be effective. Do not use 'misting' systems or untested equipment.

APPLICATION DIRECTIONS:

Apply as a fogging treatment using an InvisiFogger application system creating a 1-5 micron droplet, at a daily use rate of 1-2 fluid ounces per standard double house (8,000 square feet). Best results are obtained when injecting into production HVAC systems for uniform and constant concentration.

Do not spray compost or casing. Do not spray directly on mushrooms or mushroom growing media. Do not allow to condense on surfaces, growing media or mushrooms.

How long after application can I re-enter the site?

Immediately - There are no re-entry restrictions.

How long after application can I harvest or eat the crop?

Immediately

What pests does it repel?

Many species of flies found in mushroom production and processing including sciarid and Phorid.

What pests does it not control?

Birds, rodents and other mammals

Where can I buy it?

Distributor: Mushroom Central Supply Inc., Toughkenamon PA Phone: (610) 268-2211

Natural Forces, LLC

Online: www.naturalforcesllc.com

Phone: 866-532-4737

Where can I apply it?

For use around mushroom production facilities, processing plants and warehouses.

What are the use rates?

Indoor Applications: 1-4 fluid ounces per standard double house (8000 sq ft). Fragrance must be present for effect.

Outdoor Applications: Not recommended for outdoor use.

When should I apply it?

Use prior to filling the house, during filling, during cool-down, during spawning, up to pinning, during and between breaks. Treat when flies appear or conditions are favorable for attracting flies. Maintain application during entire period of time necessary to repel flies. Flies will re-enter areas immediately after treatment subsides.

Who can use it? Anyone, you do not have to be a certified applicator

Why use it? To repel flies.

How does it work?

Divert-O repels flies by making them dizzy and sick resulting in the pest leaving the area.

How do I apply it?

Apply as a fogging treatment using an InvisiFogger application system creating a 1-5 micron droplet, at a daily use rate of 1-2 fluid ounces per standard double house (8,000 square feet). Best results are obtained when injecting into production HVAC systems for uniform and constant concentration.

Keys to success:

Pests must have the ability to leave the treated area. If pests are trapped in treated area they will migrate to areas with limited air flow.

Increase rate when applying other products which may reduce fragrance including Malathion and other pesticides.

Where does it not work? Divert-O does not work in large open areas where the fragrance cannot accumulate.

Special Features/ Warnings

Divert-O should not be sprayed on plants as it will result in damage or loss of foliage.

Do not allow 'wet' fog to condense on mushrooms to avoid possible damage.
